SUBJECT: APPLICATION FOR SOFTWARE ENGINEERING SUMMER INTERNSHIP AT GTI

Hi,

I'm reaching out with excitement to apply for the Software Engineering Internship at GTI.

A few days ago, while exploring potential opportunities, I landed on your company's LinkedIn page and what I saw wasn't just interesting, it was inspiring. It felt like a place where ideas grow, collaboration thrives, and people actually enjoy what they do (a rare mix, honestly!).

Naturally, I headed over to your website, and I was hooked. Learning more about your services and the problems you solve gave me that familiar jolt I get when something just clicks. That's when I thought: this is where I want to be this summer.

I'm currently studying Software Engineering, and if I had to define myself in a line, I'd say: I'm someone who can't sit still without learning something new or solving something better. Whether it's diving into a new framework, refactoring code at 2 AM (with coffee in hand), or getting curious about a bug that no one asked me to fix I genuinely love it all.

One of the projects I'm especially proud of is an A/B testing system I built (details in my resume). It was designed to compare UI components and analyze user behavior clicks, time on page, conversions you name it. The goal was to help the business make smarter, data-backed design decisions. It challenged both my creativity and logic, and I loved every bit of it.

I believe a great engineer isn't defined by the languages they know, but by their ability to adapt, collaborate, and keep learning. And that's exactly the mindset I'll bring if I get the chance to work with your team.

Thank you so much for taking the time to read this. I'd be genuinely excited to chat more and explore how I can contribute this summer.

Warmly,

Islem Othmani
